BaQend

Speed Kit Makes
Websites Load Faster.

A plugin that keeps websites **state-of-the-art** in web performance.

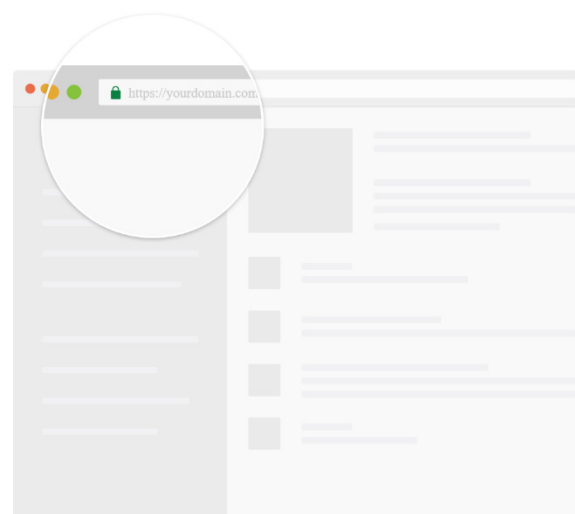

Tell Speed Kit the domain to make fast

In your account simply configure which sites and URLs Baqend should accelerate.

Include the code snippet

The snippet provides a Service Worker script that reroutes your existing website's requests through Baqend's caching infrastructure.

Enjoy unparalleled performance

Your website will be 50-300% faster as Baqend automatically applies network optimizations and sophisticated caching.

Let Your Website Load Instantly.

Speed Kit is the perfect tool for Publishers, Landing Pages, E-Commerce, and Agencies to make websites faster and the backend scalable.

Faster Page Loads

Speed Kit hooks into your existing website and makes it 50-300% faster.

Works For Your Site

Easy integration of Speed Kit into your frontend & backend tech stack.

Offline Mode

Turns you site into a Progressive Web App (PWA) with an offline mode.

Improved Scalability

Baqend handles requests, to offload your backend so it scales to more users.

Make fast page loads your competitive advantage

Fast websites are more successful. Today, an average website takes 110 requests and over 3 MB to load. Here are the studies.

Average Website Load: 9.3s

amazon

With every **100ms** of additional page load time, revenue decreases by **1%**.

YAHOO!

400ms of additional page load time results in **9%** less visitors.

Google

When increasing load time of search results by **500ms**, traffic decreases by **20%**.
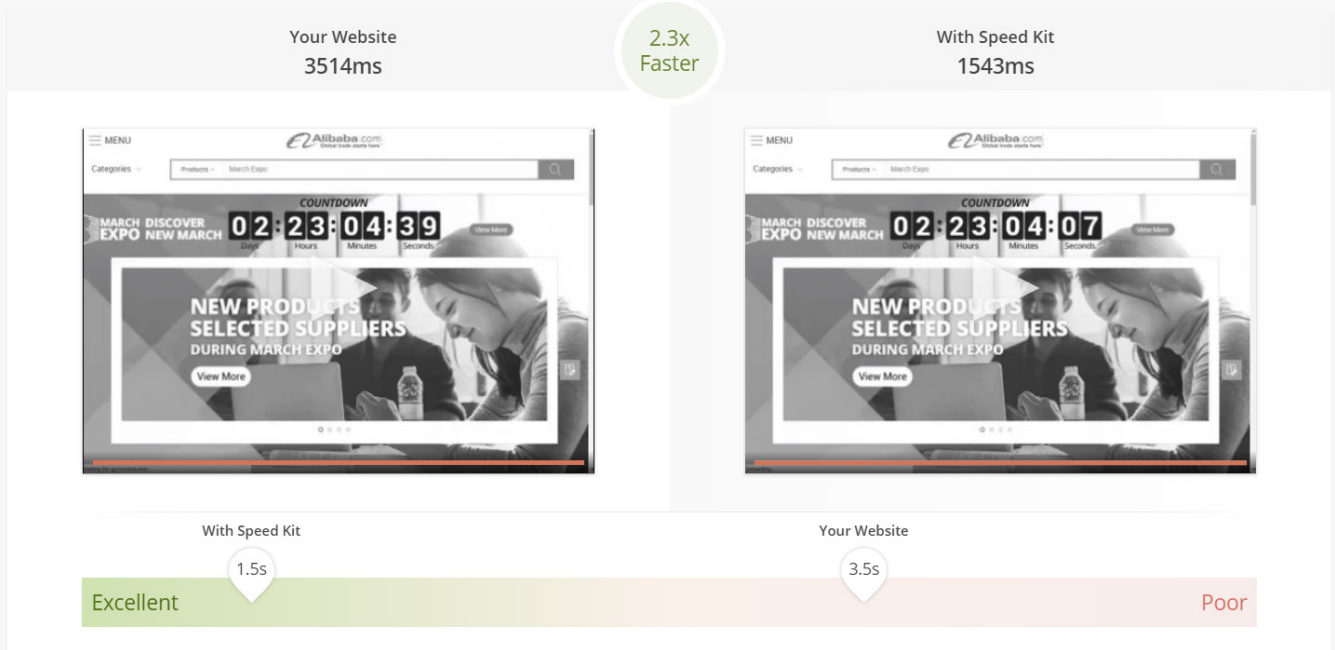

ABERDEEN

Increasing page load time by **1s** decreases conversions by **7%**.

Test your Page Speed!

Our page speed analyzer gives you an impression of how Baqend Speed Kit influences the performance of your website.
